YPlan Recruitment team August 3, 2015

Junior Python Engineer Position

Dear Sir or Madam,

I am extremely interested in the position of Junior Python Engineer with YPlan.

I would treasure the opportunity to be able to work at a fast paced company where many different tasks are required for each individual. Also, as a US citizen I would need a sponsored visa to be able to work in London. Relocating is not a problem for me. I do have experience with Python through my university, I co-taught a intro to Python class with a professor for two semesters.

I am a creative, yet focused, professional with strong software engineering skills. My knowledge of algorithms and design patterns has enabled me to implement complicated programs with large amounts of data parsing. For example, In my last semester of undergrad, I created a bus tracker iOS app for my school. Students were then able to view the bus schedule, maps of the route, and set reminders of when to catch their bus. I am an intrapeneur who aims to promote creative thinking and product development inside my organization.

Verbal and written communication are two of my strengths. For the last four years I have managed a Youtube channel explaining programming concepts. Doing so consisted of writing notes to accompany my videos, answering questions to promote community engagement, and refining my abilities through listening to criticism.

The programming and planning perspective required for a Junior Python Engineer position align with my abilities and experiences. I am enthusiastic about expanding my knowledge of programming, and embarking on new challenges. In addition, I believe I have a lot to offer YPlan in terms of programming expertise and I am excited about the prospect of working for you.

Thank you for your consideration. I look forward to meeting you to discuss how I can support the mission of YPlan.

Sincerely,

Alex 'A.J' Norton
